Eileen Carter, Assistant Professor, Nursing

### Students

Yingzhuo Liu, Jared Beltz, Matilyn Elkin, Shiqi Chen, Joshua Estevez, Christian Laing, Bofan Lin

This app is a safety house for newly graduated nurses. Here, users can utilize their fragmented time between works to seek support, connect with others and talk to themselves. As our slogan states, "take a moment to take care of yourself."

## Problem

Making life-impacting decisions, clinical works are naturally with high stress. Nursing is one of the most physically and mentally demanding professions. Nurse burnout is the state of mental, physical, and emotional exhaustion caused by sustained work-related stressors such as long and consecutive working time, the pressure of decision-making, and the strain of caring practice with poor outcomes.

## Style Guideline

# Logo

The logo of Care RN is a heart-shaped swirl. A heart is a symbol of caring, which is a generic and positive reflection of a nursing job. A swirl generates the feeling of relaxation and resolution, which is the ultimate goal of this app, to prevent burnout.

Care RN

# Color palette

All visual components of this app were specifically designed to be calming and relaxing. No adjacent visual components were designed to be with high color contrast

# User Flow

# Signing Up

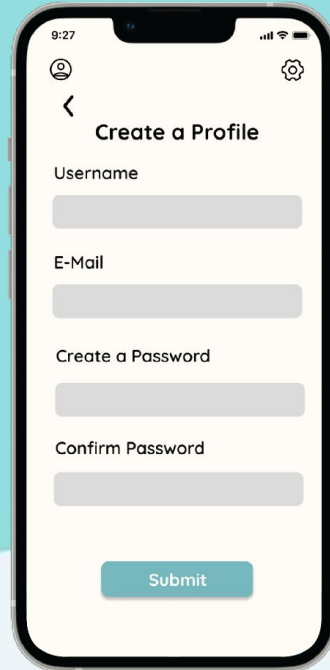

Signing up for CareRN has been designed in a way to make users feel comfortable when creating a profile. Our team's simplistic and easy to use design promotes less worry when thinking of your account here at CareRN

# Signing Up

The only thing you need to provide us to create your profile is a username, email, and password. No need for any other info, simple and easy. Once done, you'll head to the homepage.

9:27

< Create a Profile

Username

E-Mail

Confirm Password

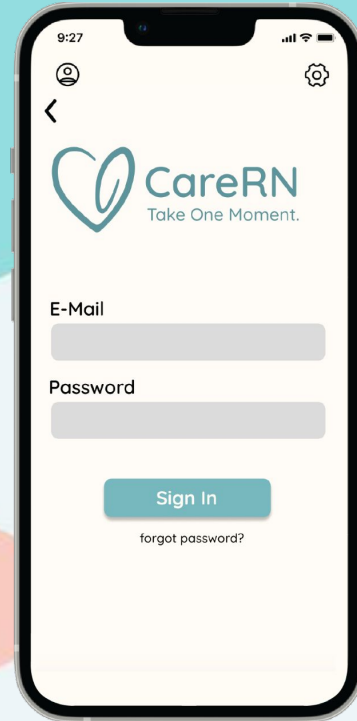

Submit

The image shows a smartphone screen with a white background. At the top, the time is 9:27. Below the status bar, there are icons for a profile and settings. The main heading is 'Create a Profile' with a back arrow to the left. There are four input fields: 'Username', 'E-Mail', 'Create a Password', and 'Confirm Password'. Each field has a light gray placeholder bar. At the bottom, there is a teal 'Submit' button.

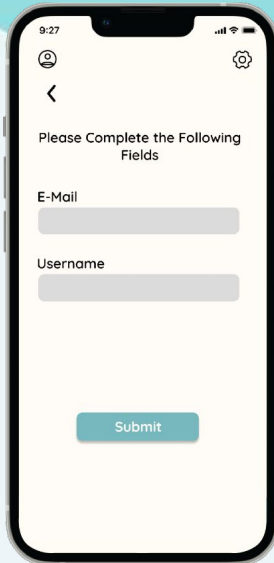

# Logging In

Once you've created your profile, logging in is very simple. Using the same method as most social media, simply put in your email and password.

# Forgot your Password?

No Problem. After touching the “Forgot Password” button on the log in page, submit your email and username. After that, a 4 digit authentication PIN will be sent to the email you’ve submitted. Enter the PIN, then create a new password.

This screen shows a mobile app interface with a back arrow, a settings gear, and a title "Create a Password". It contains two input fields labeled "New Password" and "Confirm Password", and a "Submit" button at the bottom.

# Homepage

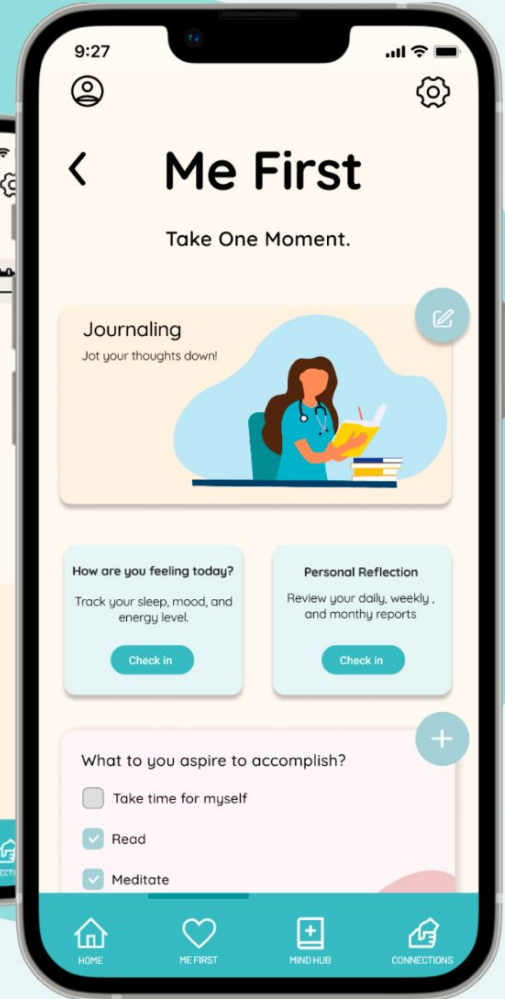

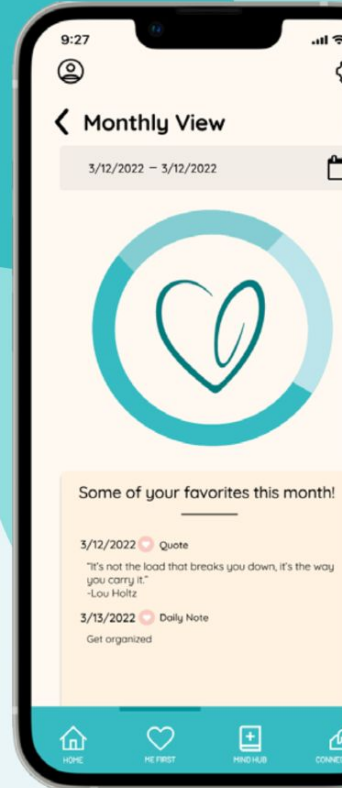

Users can access all the functions of this app from the home page, including the three main functions: “Me First”, “Mind Hub” and “Connection”; setting, profile update and quick mood recording.

# Me First

Me First is the heart of CareRN and is the epitomy of “take one moment.” This section allows for the user to take one moment out of their day and pay closer attention to their needs and desires.

Me First allows the user to journal their thoughts, track their mood, view their personal reflection throughout the weeks and months, and set aspirations.

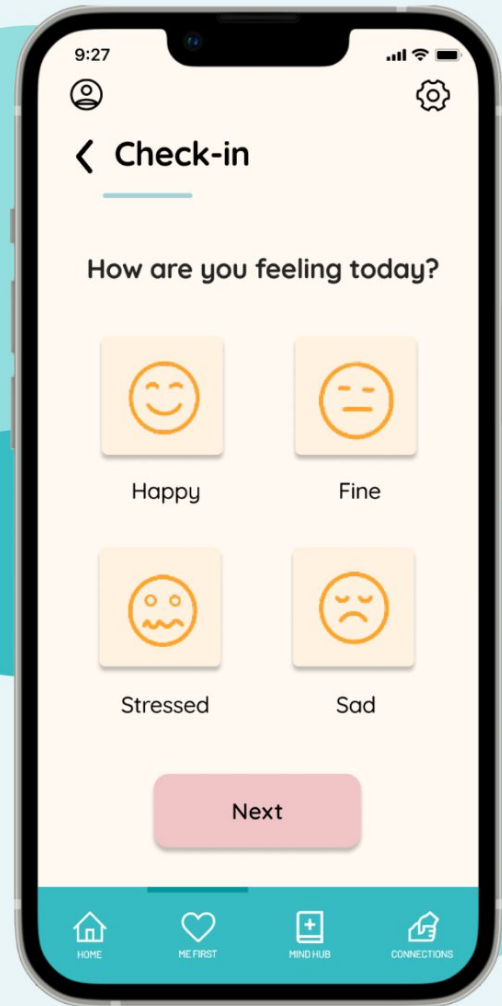

# Me First: Journal

For Resident Nurses, one of the most important things is maintaining confidentiality. For the journaling section of Me First, users will be able to input a password to keep their journals private. In this section, users will be able to journal and review other journal entries they wrote in the past. In their journal reflection, they can see each journal made per week as well as completed goals and mood's recorded per day.

# Me First: Mood-Tracker

The CareRN mood-tracker is a quick survey of your current mood. With this survey, resident nurses can take a few moments to record how they are feeling and how they have been sleeping. By completing this, users will be able to become more aware of how they are feeling rather than simply going through the motions.

# Me First: Personal Reflection

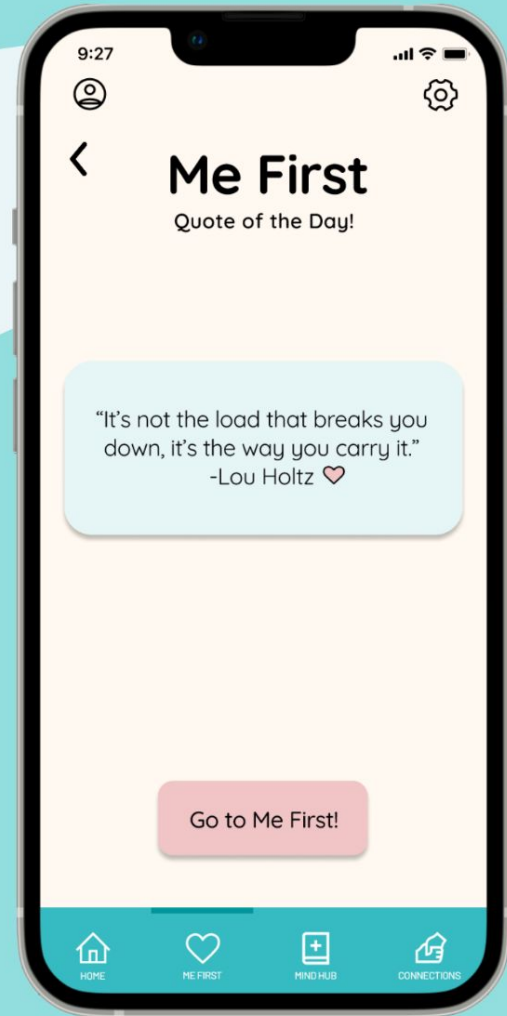

The personal reflection is a space to re-view your overall mood, sleep, and energy over the past month, as well as look back at some of your favorites. On this application, users will be able to favorite quotes, daily notes, journals, and blogs so that they can look back at what motivated them!

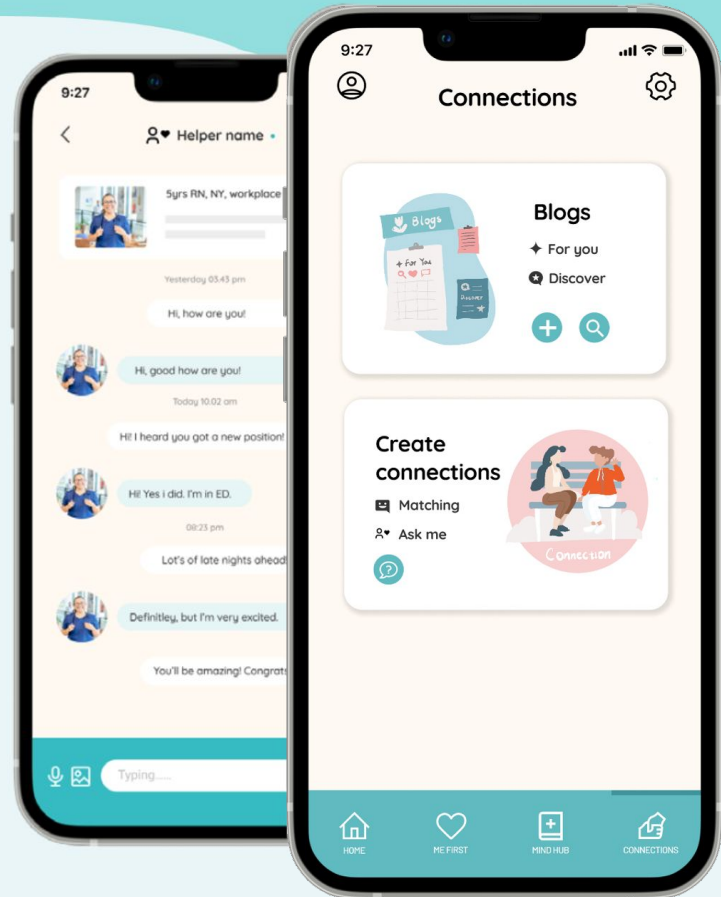

# Me First: Daily Quote

Before the Me First homepage, the application relays a new quote every day. This piece of information allows the user to feel motivated to pay closer attention to themselves and their needs. On this page, you can favorite the quote by clicking the heart, which will allow you to keep record of your favorite quotes. To find them, the user can click onto the personal reflection section in Me First!

# Connections

One of the biggest aids to burnout is communication. Therefore, CareRN provides different sources of connections for RN's to build and feel heard. With these resources, resident nurses will be able to understand that they are not alone when it comes to these overwhelming emotions. The connections page of CareRN includes a blogs page and an "Ask Me" section.

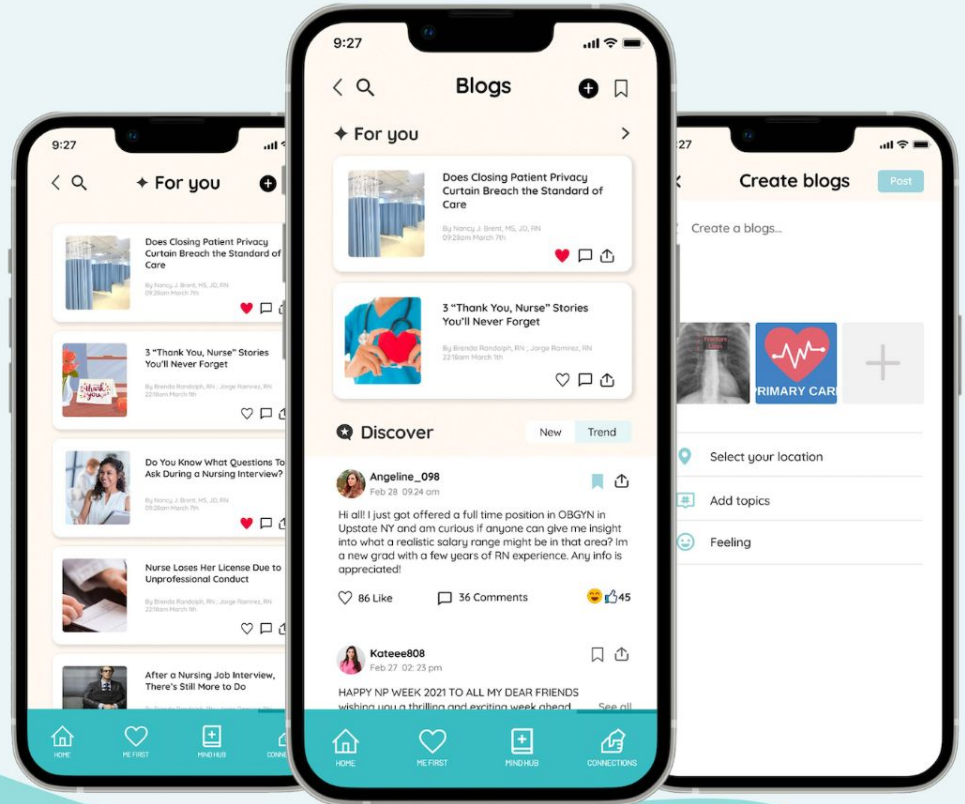

# Connections Blogs

All 45 🤔 32 👍 13

Readable blogs come from two sources:  
blogs posted by other users and articles  
selected by editors.

# Connections

## Create connections

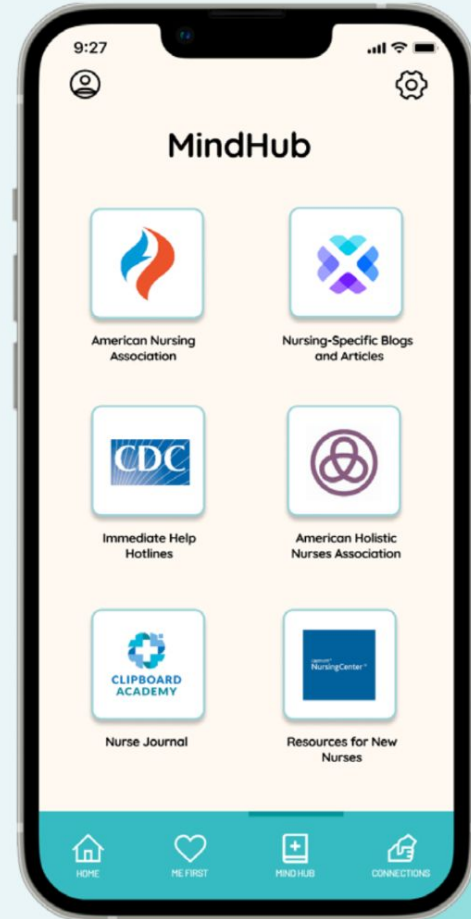

Through “Create connections”, users can post specific questions to people with specific specialization, experience, working location or background.

Direct messages can be submitted to any users found under the “Connection” page. All message exchanges are saved under “Chat”.

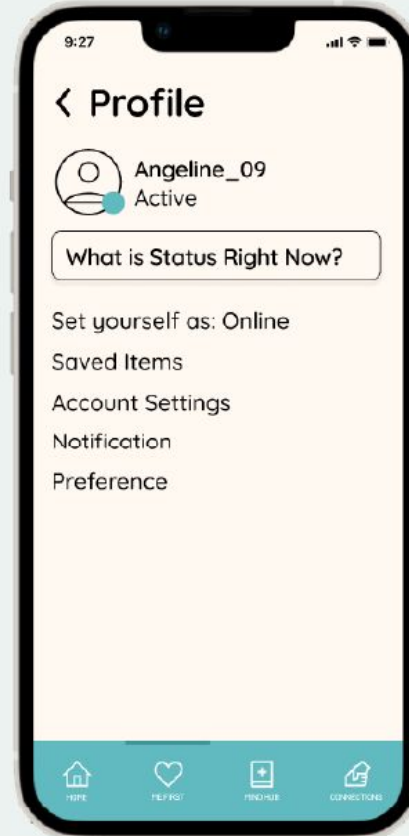

# Mind Hub

Mindhub is a resource page that allows users to view similar organizations as well as other affiliations. This page allows for the user to become more aware of their needs as well as understand other people's similar situations.

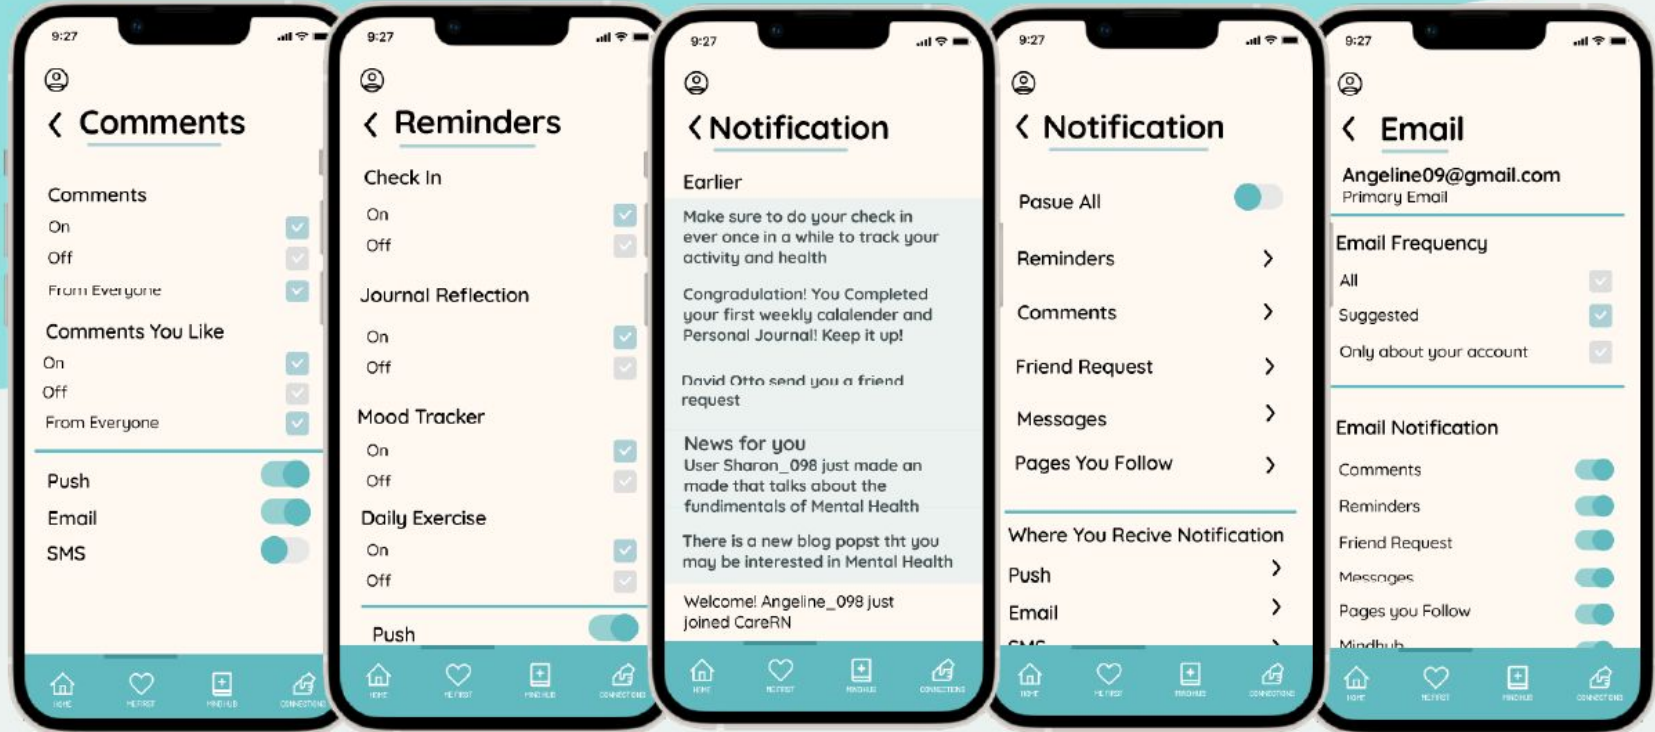

# Profile

In the setting bar, you can check out the details that you have added when you first started up the app and signed up for. You can check all your personal information like your password, pin, email and phone number, as well as your online app status.

# Notification

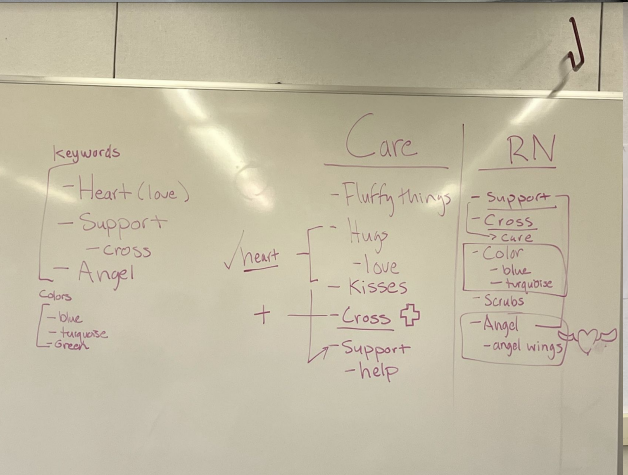

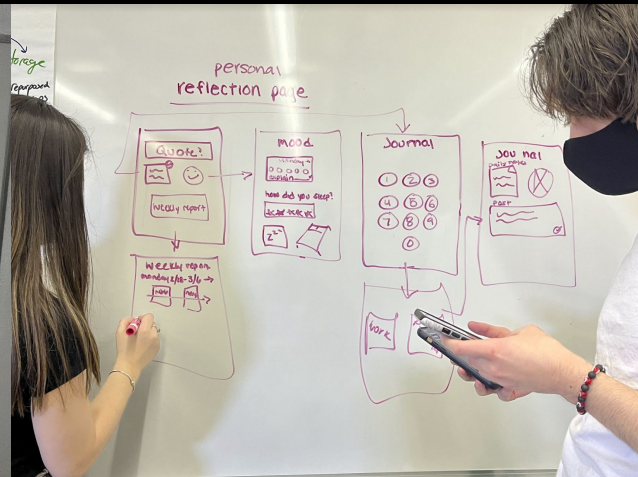

The User can also access the app setting through their profile and make change in the “Notification” tab. In this page, users will be able to edit the setting, and see what features they want on. This will allow resident nurses to be reminded of the latest news and updates, and maintain their motivation.
