**Cleveland Clinic**

We're begging you. Hospitals across Ohio have more COVID-19 patients in their ERs and ICUs than ever before. The overwhelming majority are unvaccinated. This is preventable — the best way to avoid serious illness is the vaccine. So, get vaccinated and get your booster. And keep taking all the standard precautions like social distancing, washing your hands, and of course, mask up — even if you're vaccinated. If you do feel sick, get tested for COVID-19 at your local pharmacy, urgent care or physician's office. Not the ER. Then please encourage neighbors, friends and family to take all these steps, too.

We need you to care as much as we do.

**Help.**

We need you to care as much as we do about preventing the spread of COVID-19.
