ON BOARDING

On Boarding

My onboarding process focuses on clarity, personalization, and ease of entry. I begin by introducing the app's value through simple, visually guided screens, then transition into user-specific setup by allowing them to define their nutritional goals.

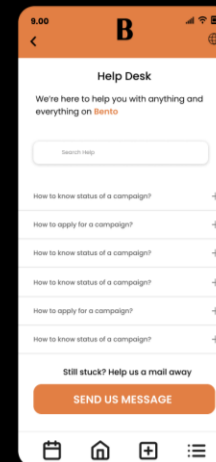

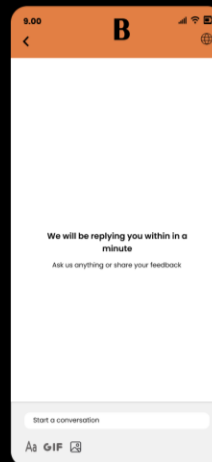

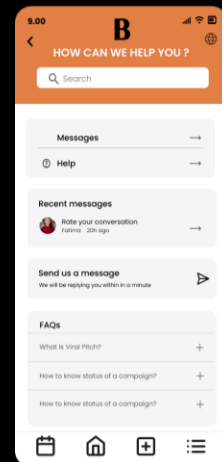

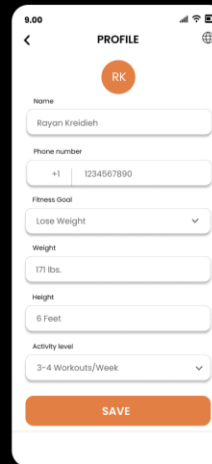

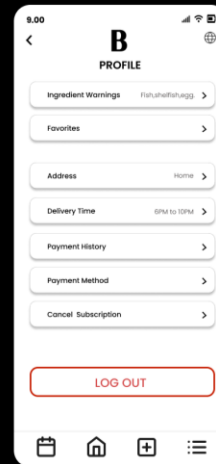

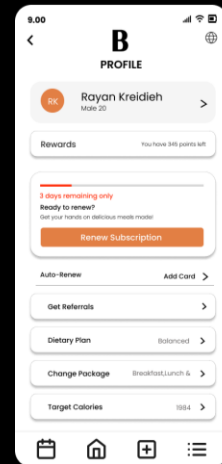

The flow quickly moves into account access with a minimal login and OTP verification system, reducing friction while maintaining security. Overall, the experience is designed to feel smooth and progressive, helping users understand the product while getting started with minimal effort.

PROFILE & SUPPORT

PROFILE & SUPPORT

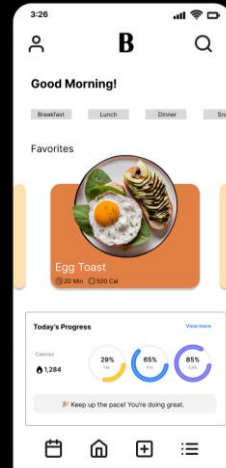

The profile and support sections are designed for clarity and control. The profile organizes personal data, preferences, and subscriptions into easy-to-scan modules, while the support system combines FAQs, search, and direct messaging for quick, flexible assistance. Together, they create a seamless experience where users can manage their account and get help without friction.

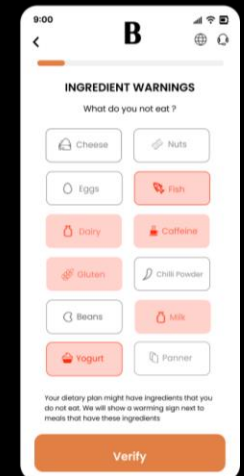

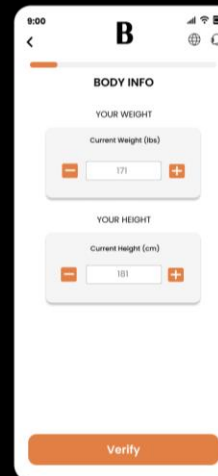

HOME SCREEN & USER PREFERENCES

HOME SCREEN & USER PREFERENCES

The home screen is designed to give users a clear, personalized overview of their meals, favorites and progress, using modular sections for quick access and easy navigation. User preferences allow for deeper customization, letting users tailor dietary goals, restrictions, activity levels and habits to create a more personalized and relevant experience.

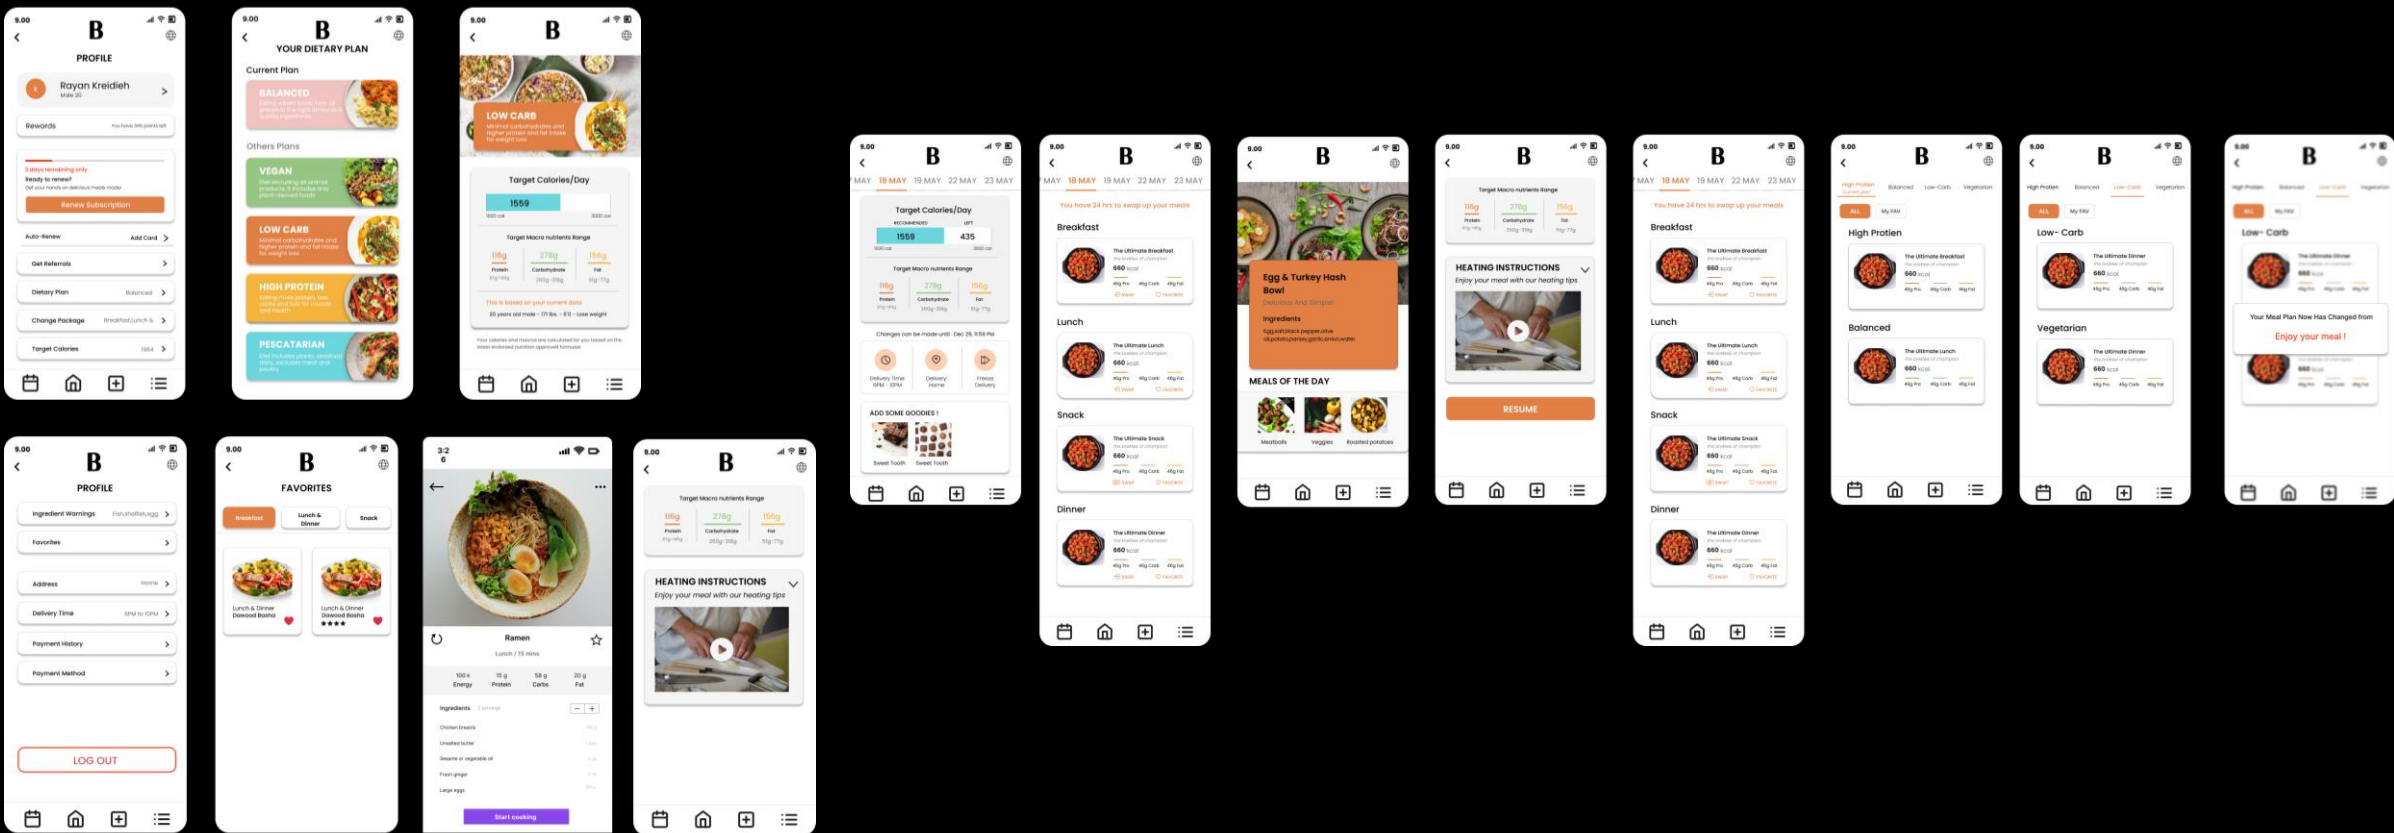

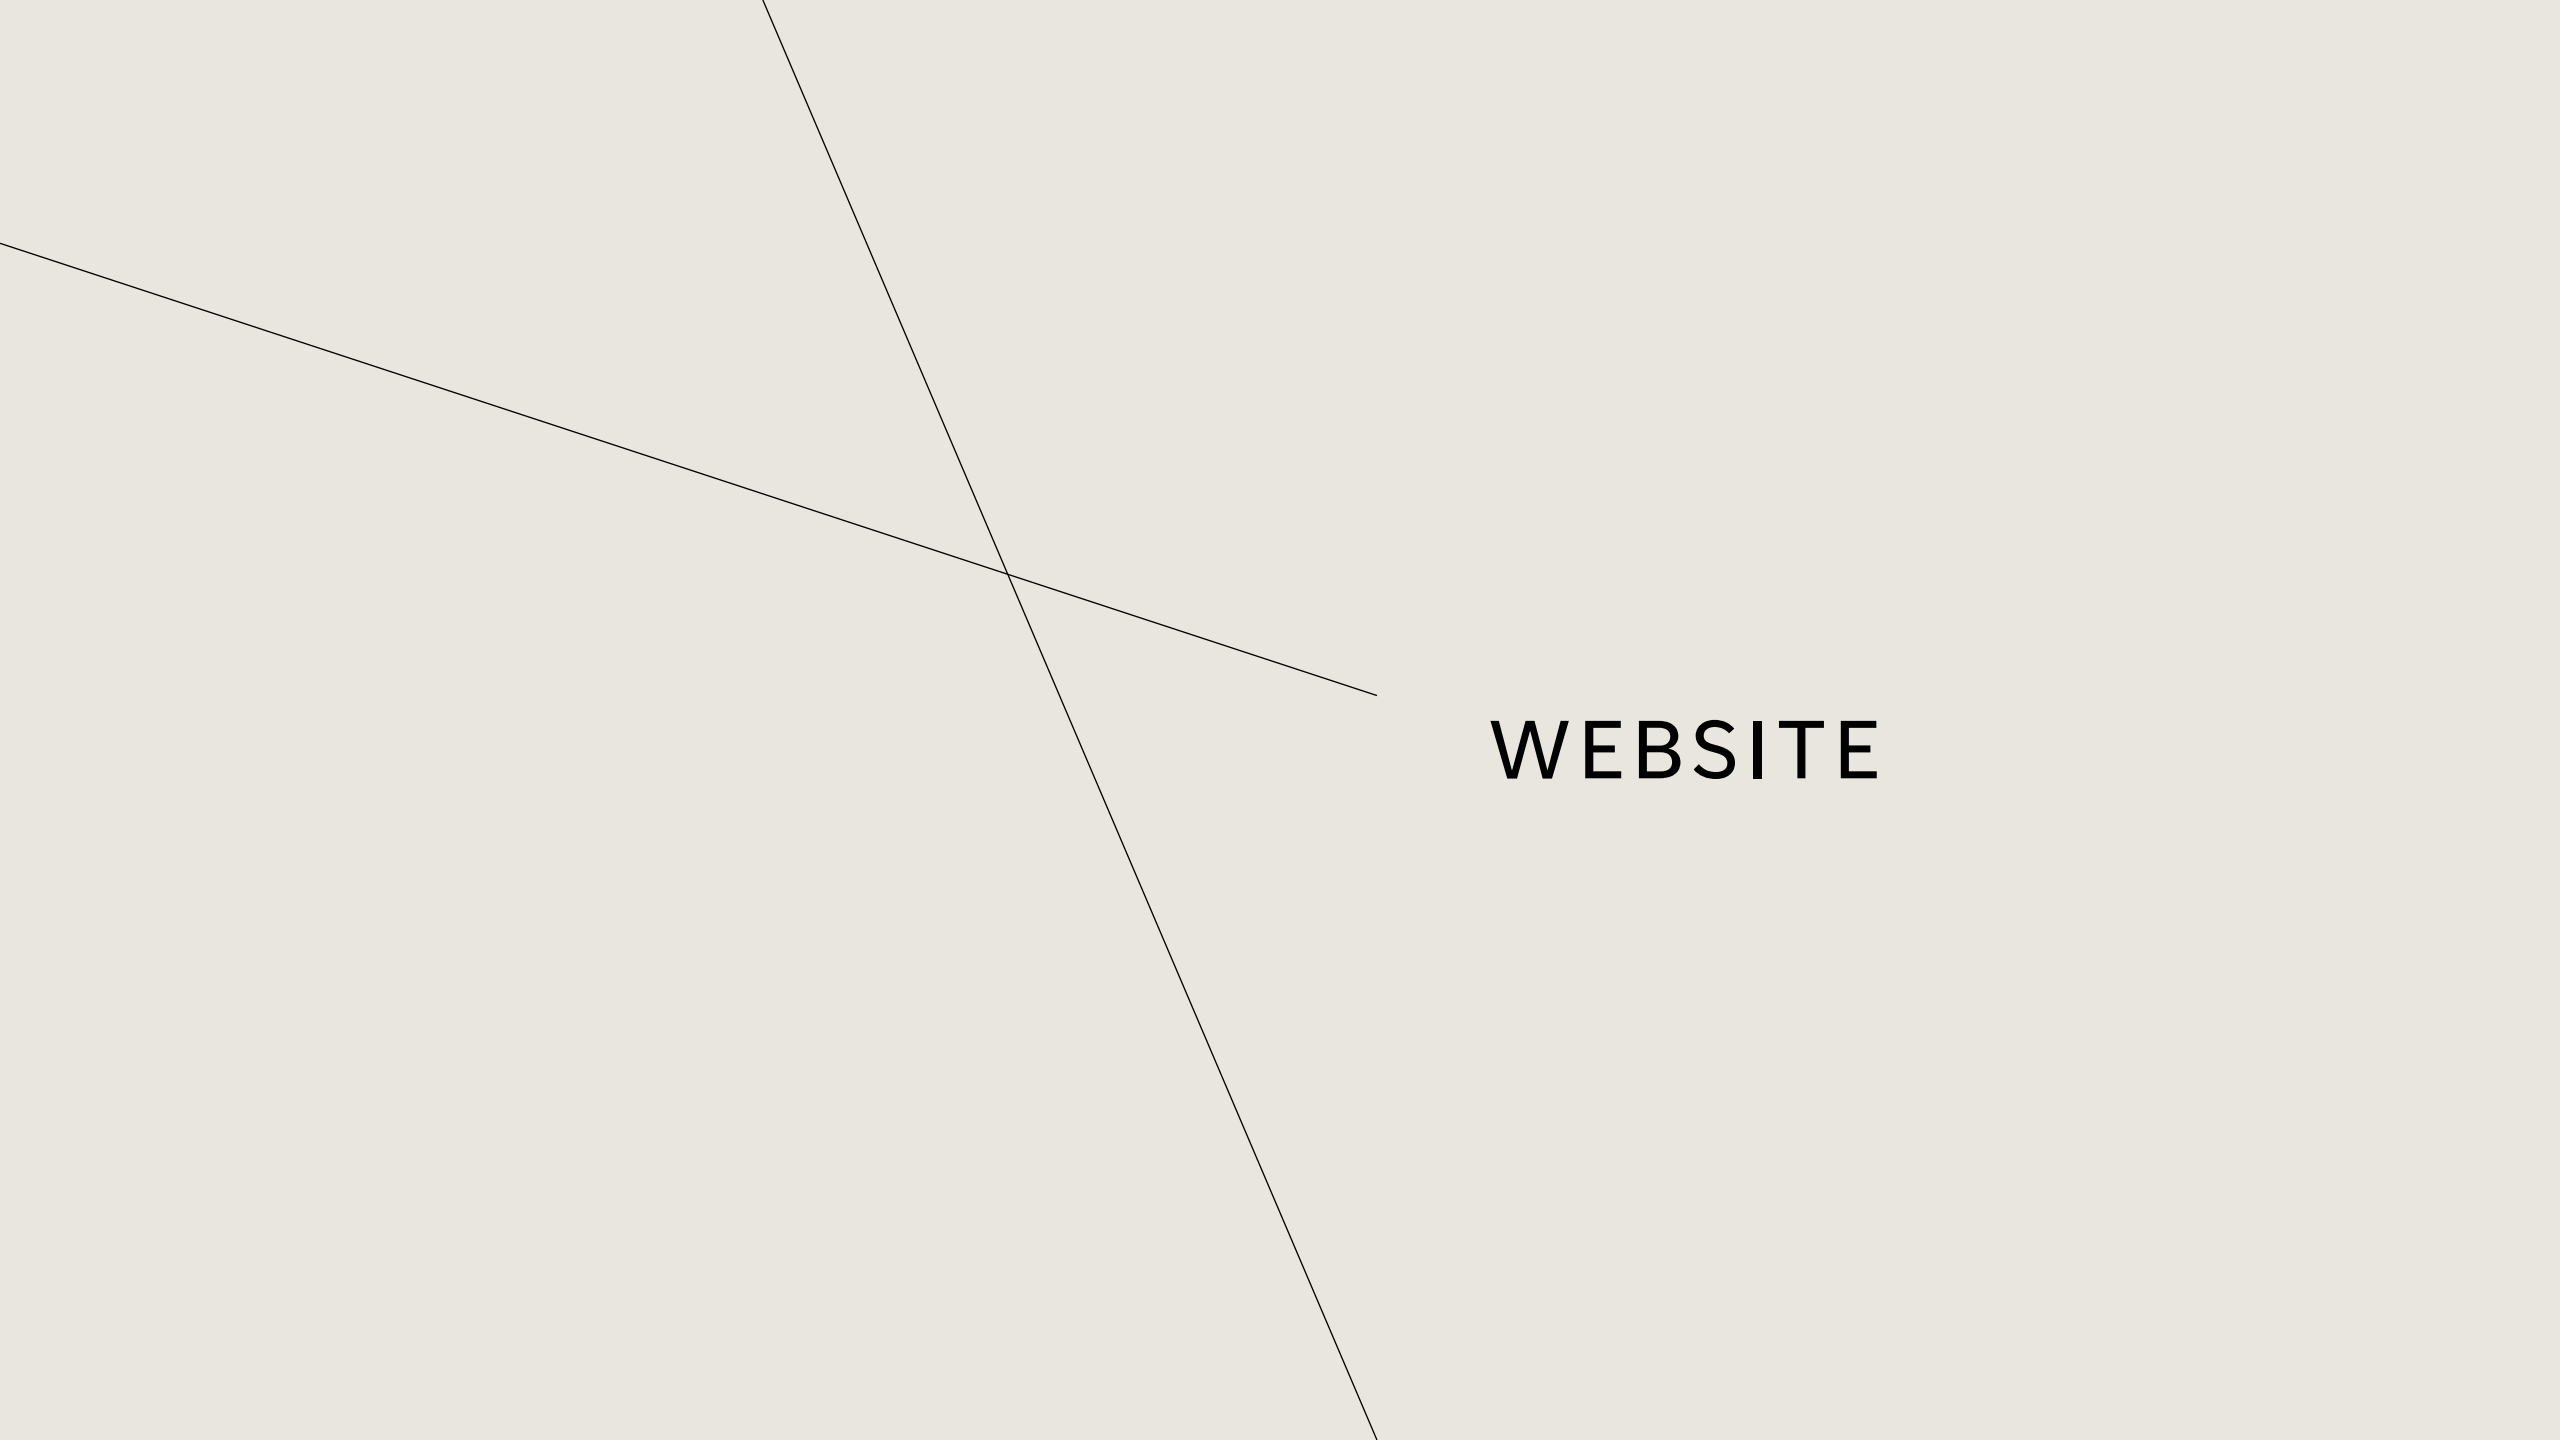

CHANGES &
ADDITIONS

Changes & Additions

The changes and additions section gives users flexibility and control over their meal experience. It allows them to swap meals, save favorites for quick access, and adjust their diet plan as their goals or preferences change, all within a simple and intuitive interface.

An abstract graphic on a light gray background. Two thin, dark gray lines intersect. One line is nearly vertical, starting from the top center and extending towards the bottom right. The other line is nearly horizontal, starting from the top left and extending towards the right. The word "WEBSITE" is written in a bold, black, sans-serif font, positioned to the right of the intersection point.

WEBSITE

The Bento Website

The website section extends the product beyond the app, serving as an entry point for new users and a resource hub for existing ones. It includes a landing page, recipes, and reviews, designed to showcase the service, build trust, and provide additional value through accessible and engaging content.
