You can't look away.

Connecticut Children's

This isn't
a feel-good story.

It's a story of sick kids fighting for their next breath ...
fighting for their lives.

These tiny, but mighty, patients are battling giants,
their courage nothing short of inspiring.

Parents are living on the edge,
doctors and nurses are on the front lines,
giving everything they've got, every damn day.

We're doing everything we can,
but this is a battle we can't win on our own.

We need research.
We need breakthroughs.
We need you. They need you.

You can look away.
Or you can change their lives.

Will you?

Meet Nate.

He was just a toddler when sickle cell disease stole several fingers, part of his arm, ear and both legs.

At Connecticut Children's, we're 100% about kids—
100% dedicated. 100% relentless. 100% audacious.

To us, 100% isn't just a number—
it's a promise to find answers to big medical questions and cures for the teeniest patients.

It's why kids from across the country and around the world come to us to find hope, cope, and heal.

It's what keeps us up at night and pushing the edge of what's possible, day in and day out.

It's our reason for being.
Because, with kids, there's no partway.
You're either 100% in, or you're out.

Are you with us?

Meet Archer.

At 28 weeks and 4 days, Archer was born too early,
and teeny-tiny, weighing just 2 pounds, 13 ounces.
He's growing stronger, but his NICU journey is far from over.

Kids like Archer need more than Beanie Babies.
They need groundbreaking medical research
that leads to revolutionary treatments and
lifesaving surgeries designed for their growing bodies.

They deserve more than hope for the best.
They need answers, not excuses.

This isn't a playground, it's a battleground.
We're solving the unsolvable, right here.

From bio-engineering baby lungs and rebuilding
baby aortas to 3D printing esophagi and growing
brain tissue to fight tumors, we're pushing the limits.
And we're just getting started.
We've got firsts to pioneer, cures to find,
and futures to rewrite.

We're not just hoping for the best.
We're making breakthroughs happen.

Can we count on you?

Meet Daniela.

Every three weeks, she needs new blood to survive.
Missing just one transfusion puts her life at risk.

We're a destination for pediatric care—transforming the well-being of children and families, and elevating the quality of care across the region and beyond.

By bringing world-class specialty services closer to home, we're flipping the script: instead of Connecticut kids traveling for treatment, families from all over are coming here for advanced care rarely found, even in top children's hospitals.

We're helping kids grow healthy, and communities grow stronger by expanding access to care—so every child gets the treatment they deserve, no matter their circumstances.

We're not just raising the standard—
we're redefining it.
And it's all happening right here.

Do you have what this takes?

This isn't a plea.

It's a call to action to step up and be part of the solution.

These kids didn't ask for cancer, for illness,
or for accidents that change everything.

They didn't ask for their futures to hang by a thread.
And they don't have the power to fix this.

But you? You get to choose how this ends.

You have the power to change the future ...
to fuel the groundbreaking treatments, research,
and cures.

Make it 100% possible.

This is your chance to do something big—
to be part of something bigger.
Something 100% audacious.

Join the fight.
Be 100%.
